BLACK MAGIC RUST PROTECTION

ELECTRONIC RUST PREVENTATIVE SYSTEM

A SINGLE UNIT FIXED UNDER THE BONNET IS ALL
THAT IS NEEDED TO MINIMISE THE CHANCE OF
GALVANIC AND ELECTROLYTIC ACTION.

THE SPECIALIST'S CHOICE

The Black Magic Rust Preventative System creates a positive ion flow thus minimising the chance of galvanic and electrolytic action.

A single unit fixed under the bonnet is all that is needed.

If further protection is desired due to regular beach-type driving, another unit can be fixed at the rear of the vehicle.

What are the Benefits of Black Magic?

- Protects both the inside and outside surfaces of your vehicle
- Avoid protrusion rust developing from stone chips
- Stops or slows any existing corrosion
- Does not interfere with vehicle electronics
- Compliant with new car warranty
- Draws only 14mA
- No moving parts
- Compact size: 77mm x 52mm x 23mm
- No need for multiple wired pads, capacitive plate is attached to unit.
- Tinned power and earth cables
- Enclosure manufactured from GP ABS material
- LED light to indicate correct operation
- DIY installation kit included

The science behind Black Magic Rust Protection.

By producing a positive charge, this device creates a positive ion flow thus minimising the chance of galvanic and electrolytic action. Evidence shows that if you supply more electrons to the vehicle than what the elements can handle, you can diminish or prevent corrosion.

The Rusting Process

Easy Installation

- Choose a dry, flat position to install the Black Magic Rust Protection away from engine solvents etc, ensuring the surface is thoroughly clean
- Peel the protective strip from the adhesive backing, making sure the adhesive pad remains in place
- Place the Black Magic Rust Protection into position applying firm pressure for 15 seconds
- Connect red (positive) and black (negative) wires to the battery
- The LED on the Black Magic Rust Protection will illuminate to indicate correct system operation
